Hi **Ex. 6 - Personal Privacy**

How much of the standard did we receive? Did a MSDS sheet come with the standard?

I promised Raj Singhvi with the ERT lab in R2 some of the standard, so could you divide up the standard and I will have him come get it.

We need to see what solvent this stuff is soluble in so it can be diluted and then injected onto a GC/MS first to see if it will elute, then we can go from there.

Terry

Terry and Larry,

Today we received a sample of the methylcyclohexane methanol for use as a standard material for West Virginia Chemical Spill analytical testing. Did we want to share this material with another lab in Region 2? Would you like for us to begin with methods development for this chemical? How would you like for us to proceed?

Please put both PHILIS units on alert to deploy to west virginia. See if you can find a source of methylcyclohexane methanol and purchase some and try running by gcms and lcms. Will all to explain later
